

Assignment – 1.2

Q - 1. Draw a labeled diagram of an ATX motherboard and mark at least 8 different slots and ports (such as RAM slots, PCIe slots, SATA ports, USB headers, CPU socket, power connector, etc.).

Q - 2. Research and list 3 popular CPU socket types (for example: LGA1151, AM4, LGA1200) and name one compatible CPU model for each.

<u>CPU Socket Type</u>	<u>Compatible CPU Model</u>
LGA1151	Intel Core i5-9600K
AM4	AMD Ryzen 7 3700X
LGA1200	Intel Core i7-10700K

Q - 3. Explain in your own words the primary functions of the CPU and the chipset on a motherboard, and describe how they work together when you open a music app like Spotify.

CPU (Central Processing Unit):

- The CPU is the brain of the computer.
- It processes instructions, performs calculations, and runs programs.

Chipset:

- The chipset is the communication manager on the motherboard.
- It controls the flow of data between the CPU, memory, storage, and other devices.

How they work together (Opening Spotify):

1. You click the Spotify icon.
2. The chipset gets the app data from the storage and sends it to the CPU.
3. The CPU processes the instructions and starts the app.
4. The chipset helps transfer music data between the CPU, memory, and speakers, so you can listen to music.

Q – 4. Find a clear photo of a real motherboard (from the internet or your own device), and identify at least 5 different ports or slots by circling them and labeling each one.
