

Assignment – 4.5

Q - 1. A user reports their laptop won't power on even when plugged in. List 5 troubleshooting steps you would take to diagnose the cause, and for each step, explain what you are checking for.

Laptop Won't Power On – Troubleshooting:

1. **Check charger** – Make sure it is properly connected and working.
2. **Check power socket** – Try another working socket.
3. **Inspect cable** – Look for cuts, damage, or loose connections.
4. **Power reset** – Unplug charger and hold the power button for 15–20 seconds.
5. **Check indicators** – Look for charging lights, fan noise, or beep sounds to identify hardware problems.

Q - 2. You receive a helpdesk ticket: 'My monitor is showing a blank screen, but the CPU seems to be running.' Write a step-by-step troubleshooting flow you would follow to identify and resolve the issue. Hint: Consider checking both hardware connections and basic display settings.

Monitor Blank Screen Troubleshooting:

1. **Check power** – Make sure the monitor is ON and plugged in.
2. **Check cable** – Check HDMI/VGA/DP cable connections.
3. **Check input** – Select the correct input source.
4. **Restart PC** – Restart the computer and monitor.
5. **Check GPU** – Make sure the graphics card is connected properly.
6. **Check display settings** – Set the correct display and resolution.
7. **Test** – Try another cable or monitor to find the problem.

Q - 3. A user complains that their wireless mouse is unresponsive, but the keyboard works fine. Describe how you would isolate whether the issue is with the mouse, the USB port, or the system settings.

Wireless Mouse Troubleshooting:

1. **Check the mouse** – Turn it ON and replace the battery if needed.
2. **Check USB receiver** – Remove and reconnect it.
3. **Try another USB port** – Connect the receiver to a different port.
4. **Test another device** – Check whether another USB device works in that port.
5. **Test the mouse on another PC** – If it works, the problem is with the original PC.
6. **Check settings/drivers** – Check mouse settings and update the mouse/USB driver.

Q - 4. Imagine you are working on a helpdesk team for a gaming cafe. One system is overheating and shutting down during use. List 3 possible hardware causes and describes how you would check each one. Hint: Think about fans, dust, and thermal paste.

Overheating PC:

1. **Faulty Fan** – Check if the CPU and GPU fans are spinning. Replace a fan if it is not working.
2. **Dust** – Check for dust inside the PC, especially on fans and vents. Clean it properly.
3. **Thermal Paste** – Check the thermal paste on the CPU. If it is dry, clean it and apply new paste.
